

Plywood kit

Model J

The model made of 14 mm Plywood contains sides made up of LIDERwood® plywood panels, with a fiberglass-reinforced polyester coating. The two-piece profiling system allows for greater speed and simplicity in assembly, avoiding rivets and external sealing beads. The rigidity and tightness of the assembly is guaranteed.

Model K

The 17 mm Plywood model contains sides made up of LIDERwood® plywood panels, self-manufactured, with a fiberglass-reinforced polyester coating. Thanks to the robustness and resistance of its panels, this model sent as a kit is appropriate for vehicles from 7.5 to 12 tons of GVM. The K model guarantees the rigidity and durability of the set.

Model Q

The 20 mm Plywood model is made of LIDERwood® plywood panels with fiberglass-reinforced polyester outer faces. This type of kit presents a special profiling system, its objective is to guarantee the robustness of the assembly and its resistance. The most appropriate use for this kit is aimed at vehicles with more than 12 tons of GVM.
