

Sandwich kit

Model E

It is a model made of 18 mm thick sandwich panels. The panels are LIDERfoam®, which has an insulating core and fiberglass-reinforced polyester on the inside and outside.

Significantly improves body weight and load capacity. Currently, this model is the lightest on the market. In addition, since it has an extruded polystyrene core, it has a certain insulating capacity.

Model W/WR/W40

They are models made with LIDERfoam® panel both 30 and 40 mm thick. Its core is made of extruded polystyrene, with faces made of fiberglass-reinforced polyester. Thanks to the self-manufacturing of panels, there is the possibility of applying any type of reinforcement to the panels. Its assembly is simple and fast as it incorporates a two-piece profiling system, with external surfaces free of rivets and visible sealing.
